Includes a Foreword by Shinichi Kurihara, Mitsubishi's Evo team leader. Der Band zeichnet den Wandel des Politischen in einer durch Vermarktlichungsprozesse und Konsumkultur geprägten Gesellschaft nach. Analysiert wird, wie der moderne Konsum zum Gegenstand von Politisierungsprozessen geworden ist, sei es in Entwürfen für alternative Wirtschaftsordnungen, in alltäglichen Formen einer "Politik mit dem Einkaufskorb" oder etwa in Aufrufen zum Kampf gegen Fettleibigkeit. Vor allem die Aneignung der politischen Ästhetik neuerer Protestformen durch die Werbung sowie die Kommentierungen von Protest in der modernen Kunst verdeutlichen die Risiken einer "Lifestyle-Politik", selbst in Konsumismus umzuschlagen oder das Politische nur noch ästhetisch zu verstehen. Vor diesem Hintergrund werden Politik- und Bewegungsformen, die Anleihen bei der Markt- und Markenkultur machen, auf ihre Macht- und Einflusschancen befragt. The advent of Internet of Things

offers a scalable and seamless connection of physical objects, including human beings and devices. This, along with artificial intelligence, has moved transportation towards becoming intelligent transportation. This book is a collection of eleven articles that have served as examples of the success of internet of things and artificial intelligence deployment in transportation research. Topics include collision avoidance for surface ships, indoor localization, vehicle authentication, traffic signal control, path-planning of unmanned ships, driver drowsiness and stress detection, vehicle density estimation, maritime vessel flow forecast, and vehicle license plate recognition. High-performance computing services have become more affordable in recent years, which triggered the adoption of deep-learning-based approaches to increase the performance standards of artificial intelligence models. Nevertheless, it has been pointed out by various researchers that traditional shallow-learning-based approaches usually have an advantage in applications with small datasets. The book can provide information to government officials, researchers, and practitioners. In each article, the authors have summarized the limitations of existing works and offered valuable information on future research directions. Volterra integral equations governing the stresses and strains in a rocket motor and the enclosed propellant grain are derived. The propellant is considered to be linearly viscoelastic in shear and purely elastic when subjected to hydrostatic pressure. The combined effects of tension, internal pressure, and an eroding inner boundary are considered, with both body force and acceleration terms omitted from the equations of equilibrium. Dynamic stresses under conditions of plane strain are also considered. The treatment is based on the Fourier transform and the complex modulus in shear. Bessel functions of complex argument are required in the solution. (Author).

Il volume è suddiviso in tre parti: - la prima, relativa al testo aggiornato del Codice della Strada completo del regolamento di esecuzione, delle leggi complementari e di una sostanziale raccolta di massime - la seconda, relativa al Decreto Legislativo 7 settembre 2005, n. 209 «Codice delle assicurazioni private» - la terza, di tecnica infortunistica stradale con tabelle e grafici dell'autore. Per rendere facile e completa la consultazione del Codice della Strada ogni articolo è seguito da un sommario, dai relativi articoli del Regolamento, dalle leggi complementari e dalle massime di riferimento. La parte relativa alle Assicurazioni di RCA è completata dalle più recenti massime giurisprudenziali.

Our intention in this collection is to provide, largely through original writings, an extended account of pi from the dawn of mathematical time to the present. The story of pi reflects the most seminal, the most serious, and sometimes the most whimsical aspects of mathematics. A surprising amount of the most important mathematics and a significant number of the most important mathematicians have contributed to its unfolding directly or otherwise. Pi is one of the few mathematical concepts whose mention evokes a response of recognition and interest in those not concerned professionally with the subject. It has been a part of human culture and the educated imagination for more than twenty-five hundred years. The computation of pi is virtually the only topic from the most ancient stratum of mathematics that is still of serious interest to modern mathematical research. To pursue this topic as it developed throughout the millennia is to follow a thread through the history of mathematics that winds through geometry, analysis and special functions, numerical analysis, algebra, and number theory. It offers a subject that provides mathematicians with examples of many current mathematical techniques as well as a palpable sense of their historical development. Why a Source Book? Few books serve wider potential audiences than does a source book. To our knowledge, there is at present no easy access to the bulk of the material we have collected.
