Hepatitis C is a liver disease caused by the hepatitis C virus (HCV) and infects approximately 75 million individuals worldwide. It is also one of the major causes of liver cancer and liver transplants. The elucidation of the HCV genome, and the development of a whole cell system to study the virus spurred the search for novel direct acting antiviral drugs to cure this disease. This global effort culminated in the development of direct acting antiviral drugs that led to cure rates approaching 100% in all patient populations after only 8-12 weeks of therapy. These efforts resulted in one of the greatest achievements in public health and provides the potential for eliminating HCV as a major disease worldwide. This volume is aimed at a broad audience of academic and industrial scientists interested in the discovery and development of drugs to treat viral diseases and those interested in reading about one of the most unique accomplishments in biomedical research. The volume will provide a one of a kind reference work that highlights the many efforts, from the discovery of the HCV virus, to the invention of breakthrough medicines and their use in the real world to cure patients. It is the companion book to the volume "HCV: The Journey from Discovery to a Cure - Volume II".

"Bad Blood meets Dreamland in this kaleidoscopic investigation into the shadowy and vampiric blood business and the dangerous limits of demand for the crucial resource that runs through our very veins. Every year, about twenty million Americans sell blood plasma for cash in a barely regulated market dominated by private industry and off-the-grid trafficking. These commercial efforts prey on an insatiable market for medical and scientific innovation fed from the veins of some of the country's most marginalized communities, such as undocumented immigrants and residents of poverty-stricken Flint, Michigan. We are often told that "blood donations" are used to save lives, but blood plasma, a component of whole blood, has become a precious commercial good. Blood plasma is collected and marketed by private industry, with the United States one of just

five nations on the planet that have not yet banned the practice of pay-for-plasma giving. This precious resource is used for everything from expensive and unproven age-reversing treatments to costly and experimental cures for novel diseases like COVID-19. Based on a cross-country investigation into the plasma-giving capitals of the country, in-depth research into the blood industry, and her personal experience as a beneficiary of plasma-derived treatment for a rare condition, Kathleen McLaughlin's *Blood Money* reveals the underhanded machinations and unbalanced power structures of the blood industry. Taking us from China's blood black market to Silicon Valley's shadowy tech startups, this is an unforgettable inside look at an industry many of us had no idea even existed. *Blood Money* is an electrifying exposé that demonstrates the shadowy overlap between big medicine and big business and paints a searing portrait of the extent to which American industry feeds on the country's most vulnerable"--
