World History Jan 10 2022 World History: An Introduction provides readers with the knowledge and tools necessary to understand the global historical perspective and how it can be used to shed light on both our past and our present. A concise and original guide to the concepts, methods, debates and contents of world history, it combines a thematic approach with a clear and ambitious focus. Each chapter traces connections with the past and the present to explore major questions in world history: How did humans evolve from an endangered species to the most successful of them all? How has nature shaped human history? How did agricultural societies push human history in a new direction? How has humankind organized itself in ever more complex administrative systems? How have we developed new religious and cultural patterns? How have the paths of 'The West' and 'The Rest' diverged over the last five centuries? How, at the same time, has the world become more interconnected and "globalized"? How is this world characterized by growing gaps in wealth, poverty and inequality? Sharp and accessible, Eric Vanhaute's introduction to this exciting field demonstrates that world history is more of a perspective than a single all-encompassing narrative: an instructive new way of seeing, thinking and doing. It is an essential resource for students of history in a global context.

The Industrial Revolution in World History Jan 30 2021 The industrial revolution was the single most important development in human history over the past three centuries, and it continues to shape the contemporary world. With new methods and organizations for producing goods, industrialization altered where people live, how they play, and even how they define political issues. By exploring the ways the industrial revolution reshaped world history, this book offers a unique look into the international factors that started the industrial revolution and its global spread and impact. In the fourth edition, noted historian Peter N. Stearns continues his global analysis of the industrial revolution with new discussions of industrialization outside of the West, including the study of India, the Middle East, and China. In addition, an expanded conclusion contains an examination of the changing contexts of industrialization. The Industrial Revolution in World History is essential for students of world history and economics, as well as for those seeking to know more about the global implications of what is arguably the defining socioeconomic event of modern times.

Food in World History Sep 18 2022 The second edition of this concise survey offers a comparative and comprehensive study of culinary cultures and food politics throughout the world, from ancient times to the present day. It examines the long history of globalization of foods as well as the political, social, and environmental implications of our changing relationship with food, showing how hunger and taste have been driving forces in human history. Including numerous case studies from diverse societies and periods, Food in World History explores such questions as: What social factors have historically influenced culinary globalization? How did early modern plantations establish patterns for modern industrial food production? Were eighteenth-century food riots comparable to contemporary social movements around food? Did Italian and Chinese migrant cooks sacrifice authenticity to gain social acceptance in the Americas? Have genetically modified foods fulfilled the promises made by proponents? This new edition includes expanded discussions of gender and the family, indigeneity, and the politics of food. Expanded chapters on contemporary food systems and culinary pluralism examine debates over the concentration of corporate control over seeds and marketing, authenticity and exoticism within the culinary tourism industry, and the impact of social media on restaurants and home cooks.

World History (Classic Reprint) Jan 18 2020 Excerpt from World History The scope, character, and purpose of this textbook perhaps require some clarification here. It covers the entire historic field, together with a chapter on prehistoric times; it presents a survey of human progress, rather than a chronological outline of events; it is intended for that large body of students who, for various reasons, do not take more than one year of history in the high school. They ought to gain from such a course, however brief, some conception of social development and some realization Of man's upward march from the Stone Age until the present time. Nothing but general or universal history will give them that conception, that realization. And only a history of the world will enable them to appreciate the contributions made by peoples widely separated in space and time to what is steadily becoming the common civilization of mankind. About two thirds of the book are devoted to the last three centuries. This period furnishes the immediate historical background Of the life of to-day: it is therefore the period ordinarily most interesting and profitable to the student. The chapters dealing with it are reproduced, with some abbreviation, from my Modern European History. The other chapters are based on my Early European History, but they contain much that is new, both in the text and also by way of maps and illustrations. The Cambridge World History Jun 03 2021 The era from 1400 to 1800 saw intense biological, commercial, and cultural exchanges, and the creation of global connections on an unprecedented scale. Divided into two books, Volume 6 of the Cambridge World History series considers these critical transformations. The first book examines the material and political foundations of the era, including global considerations of the environment, disease, technology, and cities, along with regional studies of empires in the eastern and western hemispheres, crossroads areas such as the Indian Ocean, Central Asia, and the Caribbean, and sites of competition and conflict, including Southeast Asia, Africa, and the Mediterranean. The second book focuses on patterns of change, examining the expansion of Christianity and Islam, migrations, warfare, and other topics on a global scale, and offering insightful detailed analyses of the Columbian exchange, slavery, silver, trade, entrepreneurs, Asian religions, legal encounters, plantation economies, early industrialism, and the writing of history.

Neutrality in World History Nov 08 2021 *Neutrality in World History* provides a cogent synthesis of five hundred years of neutrality in global history. Author Leos Müller argues that neutrality and neutral states, such as Switzerland, Sweden, Belgium have played an important historical role in implementing the free trade paradigm, shaping the laws of nations and humanitarianism, and serving as key global centers of trade and finance. Offering an intriguing alternative to dominant world history narratives, which hinge primarily on the international relations and policies of empires and global powers, *Neutrality in World History* provides students with a distinctive introduction to neutrality's place in world history.

China In World History Sep 06 2021 A novel approach to Chinese history is adopted here, in that the theme of the book is China's relations with the non-Chinese world, not only political and economic, but cultural, social and technological as well. It seeks to show that China's history is part of everyone's history. In particular it traces China's relationship since the thirteenth century to the emergent world order and the various world institutions of which that order is composed. Each chapter discusses China's comparative place in the world, the avenues of contact between China and other civilizations, and who and what passed along these channels.

Aging in World History Aug 25 2020 In *Aging in World History*, David G. Troyansky presents the first global history of aging. At a time when demographic aging has become a source of worldwide concern, and more people are reaching an advanced age than ever before, the history of old age helps us understand how we arrived at the treatment of aging in the modern world. This concise volume expands that history beyond the West to show how attitudes toward aging, the experiences of the aged, and relevant demographic patterns have varied and coalesced over time and across the world. From the ancient world to the present, this book introduces students and general readers to the history of aging on two levels: the experience of individual men and women, and the transformation of populations. With its attention to cultural traditions, medicalization, decades of historical scholarship, and current gerontology, *Aging in World History* is the perfect starting point for an exploration of this increasingly universal aspect of human experience.

History of International Relations Mar 20 2020 Existing textbooks on international relations treat history in a cursory fashion and perpetuate a Euro-centric perspective. This textbook pioneers a new approach by historicizing the material traditionally taught in International Relations courses, and by explicitly focusing on non-European cases, debates and issues. The volume is divided into three parts. The first part focuses on the international systems that traditionally existed in Europe, East Asia, pre-Columbian Central and South America, Africa and Polynesia. The second part discusses the ways in which these international systems were brought into contact with each other through the agency of Mongols in Central Asia, Arabs in the Mediterranean and the Indian Ocean, Indic and Sinic societies in South East Asia, and the Europeans through their travels and colonial expansion. The concluding section concerns contemporary issues: the processes of decolonization, neo-colonialism and globalization – and their consequences on contemporary society. *History of International Relations* provides a unique textbook for undergraduate and graduate students of international relations, and anybody interested in international relations theory, history, and contemporary politics.

Patterns of World History Jan 22 2023 *Patterns of World History* offers a distinct framework for understanding the global past through the study of origins, interactions, and adaptations. Authors Peter von Sivers, Charles A. Desnoyers, and George Stow--each specialists in their respective fields--examine the full range of human ingenuity over time and space in a comprehensive, even-handed, and critical fashion. The book helps students to see and understand patterns through: ORIGINS - INTERACTIONS - ADAPTATIONS These key features show the O-I-A framework in action: * Seeing Patterns, a list of key questions at the beginning of each chapter, focuses students on the 3-5 over-arching patterns, which are revisited, considered, and synthesized at the end of the chapter in Thinking Through Patterns. * Each chapter includes a Patterns Up Close case study that brings into sharp relief the O-I-A pattern using a specific idea or thing that has developed in human history (and helped, in turn, develop human history), like the innovation of the Chinese writing system or religious syncretism in India. Each case study clearly shows how an innovation originated either in one geographical center or independently in several different centers. It demonstrates how, as people in the centers interacted with their neighbors, the neighbors adapted to--and in many cases were transformed by--the idea, object, or event. Adaptations include the entire spectrum of human responses, ranging from outright rejection to creative borrowing and, at times, forced acceptance. * Concept Maps at the end of each chapter use compelling graphical representations of ideas and information to help students remember and relate the big patterns of the chapter.

Humans Versus Nature Nov 15 2019 "This book is about the ongoing conflict between humanity and the natural environment. Over the past 200,000 years, humans have multiplied and populated the Earth. When they domesticated plants and animals and replaced foraging with agriculture and herding, they depleted natural resources, deforested the land, and caused mass extinctions. But nature has agency too, causing pandemics of plague, smallpox, measles, influenza, and other diseases and a climate change called the Little Ice Age. In recent centuries, industrialization has accelerated extinctions, deforestation, and resource depletion, even in the oceans. Twentieth-century developmentalism and mass consumerism have caused global warming and other climate changes. Environmental movements have argued for the need to mitigate the negative consequences of technological and economic change. The future of humanity and the Earth depends on choices between achieving a sustainable balance between humans and nature, carrying on as before, or learning to manage the biosphere. environment, mass extinction, domestication, agriculture, pandemic, industrialization, developmentalism, consumerism, global warming"--

Seven Myths of Africa in World History Jul 16 2022 "Northrup's highly accessible book breaks through the most common barriers that readers encounter in studying African history. Each chapter takes on a common myth about Africa and explains both the sources of the myth and the research that debunks it. These provocative chapters will promote lively discussions among readers while deepening their understanding of African and world history. The book is strengthened by its incorporation of actors and issues representing the African diaspora and African Americans in particular." —Rebecca Shumway, College of Charleston
