Wind and rain turn rocks to sand; dead leaves mix with rock

particles to make soil; over millions of years, layers of sand and soil turn to sedimentary rock; beneath our feet in Earth's crust, extreme heat and pressure create metamorphic rocks; while lava bursts from volcanoes and cools to become igneous rock. This in-depth look at rocks and fossils gives students the chance to carry out investigations such as examining rock properties, building a rock cycle model, and even creating their own fossils. What do I need to know about science to teach children in primary school? How can I make my science teaching successful? How do children learn to investigate scientifically? What are the dos and don'ts of science teaching? Written to support teachers who need to boost their science knowledge, this book covers science knowledge in sufficient breadth and depth to enable you to teach science effectively up to the end of Key Stage 2, as well as the core teaching and learning issues involved in the investigative process. Whether you are a student or a fully qualified teacher, the book is designed to help you find what you need quickly. The introduction provides a guide to

how to use the book, including a table which cross references the subject knowledge against the National Curriculum, the QCA Scheme of Work and Primary Science Topics. This enables you to use the book in different ways, depending on your individual requirements. To ensure that teachers will be able to teach and respond to questions appropriately, the authors take science knowledge beyond what is required for Key Stage 2. This is important, as it helps to avoid over-simplifying concepts which can then cause misconceptions at Key Stage 3 and beyond. It also helps to broaden and develop the primary teacher's own knowledge. Science for Primary School Teachers is a core text for teachers in training, and in professional development into the induction year and beyond. Why do we burp when we take a swig of a fizzy drink? What are air and water actually made of? And when a liquid raw egg becomes a solid fried egg, can this change of state ever be reversible? Packed with hands-on investigations, this book

explores topics including, the properties of solids, liquids, and gases, how liquids become solids and how solids become liquids, how the water cycle works, why seawater is salty, and how changing states make recycling possible. Readers will get the chance to do experiments including discovering if there is water vapor in the classroom around them, separating mixed up substances, and even weighing the air. Assessing Science contains 44 photocopiable ideas for use with Key Stage 2 pupils. The worksheets will help you to gather evidence about children's scientific development and to assess what they know, understand and can do. Each sheet is accompanied by a clearly laid out teacher's page containing: - the National Curriculum focus - assessment objective - potential assessment activities and the anticipated outcomes - example of child's response - key vocabulary This book also contains a valuable glossary of scientific terms.
