Preschool at Home Mar 02 2021 The year 2020 has led to a massive change in the way people around the world look at education. And many have found the idea of preschooling their children at home to be the best choice for their family. This guide is designed to help caregivers begin homeschooling their preschooler. It's easier than you think! Parents and grandparents are their children's first teachers. Preschool isn't that much different from what is already being taught at home. But it focuses more on specific skills and abilities that help children prepare for kindergarten. Inside this book, you'll find: * An explanation of why preschool is so important and its lifelong benefits, * Pros and cons of buying a curriculum, * What exactly your preschooler should be learning, * Everyday activities that teach your preschooler, * How to plan your lessons, * book and toy recommendations, as well as online resources, * A special section for

families wanting to preschool in Spanish, * Reproducible planners, checklists, and more. This is not a curriculum. There are no day-to-day lesson plans. But you will find information and examples on how to make your own and how to plan out your week/year. And there are planning pages for you to copy and use. Preschool Math at Home: Simple Activities to Build the Best Possible Foundation for Your Child Dec 23 2022 Giving your preschooler a great start in math doesn't have to be complicated. Handbook of Infant, Toddler, and Preschool Mental Health Assessment Sep 27 2020 The Handbook of Infant, Toddler, and Preschool Mental Health Assessment brings together, for the first time, leading clinical researchers to provide empirically based recommendations for assessment of social-emotional and behavior problems and disorders in the earliest years. Each author presents state-of-the-art information on scientifically valid, developmentally based clinical assessments and makes recommendations based on the integration of developmental theory, empirical findings, and clinical experience. Though the field of mental health assessment in infants and young children lags behind work with older children and adults, recent scientific advances, including new measures and diagnostic approaches, have led to dramatic growth in the field. The editors of this exciting new work have assembled an extraordinary collection of chapters that thoroughly discuss the conceptualizations of dysfunction in infants and young children, current and new diagnostic criteria, and such specific disorders as sensory modulation dysfunction, sleep disorders, eating

and feeding disorders, autistic spectrum disorders, anxiety disorders, posttraumatic stress disorder, and ADHD. Chapters further highlight the importance of incorporating contextual factors such as parent-child relationship functioning and cultural background into the assessment process to increase the validity of findings. Given the comprehensiveness of this groundbreaking volume in reviewing conceptual, methodological, and research advances on early identification, diagnosis, and clinical assessment of disorders in this young age group, it will be an ideal resource for teachers, researchers, and a wide variety of clinicians including child psychologists, child psychiatrists, early intervention providers, early special educators, social workers, family physicians, and pediatricians.

The Influence of the Home Learning Environment on Preschool Children's Informal Mathematical Development May 24 2020 In the United States, children from families of lower socioeconomic status (SES) generally enter kindergarten with significantly less mathematical knowledge than children from families of middle SES. Research reveals that this discrepancy is present, although to a lesser degree, at age three years, the age many children enter preschool for the first time (Starkey & Klein, 2008). This mixed-methods correlational study explores relationships between elements of the home learning environment and the mathematical knowledge of three- and four-year-old children from lower and middle SES families in order to better understand the potential reasons for this discrepancy. First, I compare responses from 179 parents, balanced for child's age and family's SES, on a questionnaire designed to capture aspects of the quantity and quality of mathematical support children receive in the home. The questionnaire contained items about the frequency and range of activities children engage in to support the development of informal mathematics, parent practices supporting their children's mathematical development, and parents' beliefs and knowledge about typical early mathematical development in the United States. Next, I analyze videos obtained for a subset of the sample (n = 26) of parents and children engaging in activities at home, believed by parents to support early mathematical development. Specifically, I examine differences in the amount, type, and complexity of math content included in each activity, as well as differences in parents' teaching behavior as they assist their children with mathematical tasks. Correlational relationships between both the questionnaire and video data are and children's scores on a comprehensive mathematical assessment are explored. Results from the questionnaire component indicate very few differences in the amount and types of mathematical support three- and four-year-old children in both SES groups receive in the home, but very clear SES differences in parents' beliefs about early mathematical development and how it is best supported, as well as SES differences in parents' knowledge about early mathematical development. Compared to lower SES parents, middle SES parents of children at both ages hold higher expectations in terms of skills they expect children to possess by age 5, as well as a more accurate understanding of which mathematical skills are within the developmental range of most children by age 5. Both of these

constructs have predictive value, as evidenced by multiple regression models, for children's mathematical knowledge as measured by the math assessment. Middle SES parents are also more likely to provide support for the development of these skills by embedding math in the home routine, encouraging made-up games involving math, and by reading books with mathematical content to their children. The video analyses suggest that parents of children in both age and SES groups focus on similar mathematical concepts when engaging in math activities with their children, but there are qualitative differences in parents' teaching behavior that are predictive of children's performance on the math assessment when the child's age and family SES is held constant. Specifically, middle SES parents tend to structure the demands of activities in such a way that the children successfully respond to approximately 80% (three-year-olds) or 90% (four-year-olds) of the math included independently, compared to lower SES parents, who tend to structure the demands of activities such that children are only responding to approximately 50% (three-year-olds) or 70% (four-year-olds) of the math independently. Furthermore, the type of assistance provided for the problems or tasks that children do not respond to independently, appears to both vary by age and SES, and predicts unique variance in children's mathematical knowledge.
