The school of thought surrounding the urban ecosystem has increasingly become in vogue among researchers worldwide. Since half of the world's population lives in cities, urban ecosystem services have become essential to human health and wellbeing. Rapid urban growth has forced sustainable urban developers to rethink important steps by updating and, to some degree, recreating the human–ecosystem service linkage. Assessing, as well as estimating the losses of ecosystem services can denote the essential effects of urbanization and increasingly indicate where cities fall short. This book contains 13 thoroughly refereed contributions published within the Special Issue “Urban Ecosystem Services”. The book addresses topics such as nature-based solutions, green space planning, green infrastructure, rain gardens, climate change, and more. The contributions highlight new findings for landscape architects, urban planners, and policymakers. Important future cities research is considered by looking at the system connectivity between the social and ecological sphere—via varying forms of urban planning, management, and governance. The book is supported by methods and models that utilize an urban sustainability and ecosystem service-centric focus by adding knowledge-base and real-world solutions into the urbanization phenomenon. This book offers a unique insight into the rapidly changing radiology service, and offers introductory chapters which provide the fundamental underpinning knowledge required for safe and effective GI practice. Subsequent chapters discuss the evidence base related to a range of imaging procedures suitable for investigation of upper and lower GI symptoms, supported by key pathology chapters. The book also explores the range of treatments available for the more common GI tract pathology. Multi professional authorship. Detailed evidence-informed explanations of a range of individual GI procedures, including suggestions for problem solving and adaptation of technique. With extensive illustrations, medical images, boxes and tables. Performance evaluation is a critical stage of software- and hardware-system development that every computer engineer and scientist should master. Although complex – requiring skills in mathematics, measurement techniques

and simulation – performance evaluation is primarily an art; indeed, the most difficult stage in a performance analysis is defining the approach: once you know what to do, it is less difficult to define a plan of attack with your familiar software tools. We present a set of topics, which we believe should be part of every engineer's intellectual toolkit. This includes the statistical exploitation of numerical results in an efficient and ethical way, for example: how to summarize variability or fairness; what transient removal in a simulation is; and how to make predictions from a time series. We also present well-known performance patterns, which helps to quickly bring the engineer to the main issues. For queuing theory, we focus on a subset of very useful results, such as operational laws. A highlight of the book is the development of Palm calculus, also called –the importance of the viewpoint,– which is central to queuing theory. Indeed, this topic has so many applications to simulation and to system analysis in general that it is a very good time investment. This book began as a set of lecture notes for a course given at EPFL. As the National Quality Advisor and Chair of the AGAI Clinical Practice and Quality Management Committee, Dr. Allen, along with Dr. Delegge, have created a very insightful list of topics to educate gastroenterologists about how to adapt to health care reform. The issue addresses the impact in both private practices and academic medical centers. Specific issues discussed include Gastroenterologists and Accountable Care Organizations; Health Information Technology and the Gastroenterologist; Transitioning from Fellowship to Practice 2012; Going Big in Private Practice; Clinical Service Line Management; The Impact of Health Reform on GI Reimbursement; The Impact of Health Care Reform on Innovation and New Technology; Industry and Gastroenterology: A New World; and Demonstrating Value: Registries and Beyond.

Authoritative new text from the experts in GI population studies This book covers both key methodological issues and the most important information in the field, disease by disease. It focuses on population-based information and studies looking at principles and approaches to diagnosis and treatment of diseases. GI Epidemiology brings together world authorities in multiple disciplines for the very first time, to create one clear and comprehensive source. The bulk of the chapters are divided into two parts, covering methodological issues and the epidemiology of specific GI diseases. Each chapter begins with a list of key points, followed by a review written in a clear and simple style. The methodologic chapters cover evidence-based medicine, meta-analysis, systematic reviews, genetic and molecular epidemiology, clinical trials, questionnaire design, and health economics. The disease-specific chapters note the current gaps in knowledge and suggest areas for further study. GI Epidemiology serves as both a useful refresher and a reliable reference on the methods and techniques used in epidemiological studies for consultants and researchers in gastroenterology. It is also an invaluable tool for fellows/trainees in gastroenterology, candidates for recertification in the combined disciplines of gastroenterology, pediatric gastroenterology and colorectal surgery, and anyone completing MPH training. A fine team of state-of-the-art researcher/clinicians who know their fields, have contributed to the advancement of knowledge, and are in a position to judge what is truly important have here pooled their thoughts in a series of chapters on the cutting edges of gastroenterology. Four attributes render this volume superior to other update-oriented publications. The first striking feature, which is immediately evident upon scanning the table of contents, is the imaginative choice of subjects, ranging from traveler's diarrhea and sexually transmitted GI infections through

TPN and interventional endoscopy to geriatrics and iatrogenic disease. A second outstanding feature of this volume is its success in balancing basic pathophysiology with practical considerations of clinical management. This is achieved in the discussions of such diverse topics as acid-peptic diseases, infectious and other diarrheal syndromes, and hepatitis immunization. Throughout the book we are led smoothly from basic science principles to specific recommendations for diagnosis and therapy. This practical emphasis appears repeatedly and sometimes produces a delightful surprise, such as a chapter on radiology that is not technology-based but instead problem-oriented. This evidence-based book serves as a clinical manual as well as a reference guide for the diagnosis and management of common nutritional issues in relation to gastrointestinal disease. Chapters cover nutrition assessment; macro- and micronutrient absorption; malabsorption; food allergies; prebiotics and dietary fiber; probiotics and intestinal microflora; nutrition and GI cancer; nutritional management of reflux; nutrition in IBS and IBD; nutrition in acute and chronic pancreatitis; enteral nutrition; parenteral nutrition; medical and endoscopic therapy of obesity; surgical therapy of obesity; pharmacologic nutrition, and nutritional counseling. "Eichhorn also writes of French villagers hiding Jews, of the dangers faced by chaplains, of the place of Jews in U.S. Army ranks, and of General Patton's well-known displays of anger. Throughout he conveys the experience of war and how it altered forever a small-town rabbi - a man of faith and courage who never fired a gun in combat."--Jacket.

Working practices between the UK and Welsh Assembly governments in relation to cross-border policies appear much improved since the Committee's earlier reports on this subject. But a number of outstanding issues remain in transport, health and further and higher education. On transport the Committee welcomes the planned electrification of the Great Western Main Line. However, the Department for Transport appears to have washed its hands of any strategic responsibility for cross-border roads. The A483 is the clearest example of a road vital for travel within Wales but which is not important to the English region in which it is located, and as a result loses out on funding. The Committee stresses the need for comparative data on which to build solid research comparing NHS performance in the devolved nations. More needs to be done to raise public awareness of the differences in services people can expect to receive on both sides of the border. Transparency of information is vital. Research proposals in the UK Government's Higher Ambitions strategy for higher education make no reference to nations other than England, despite the UK-wide research remit of the Department for Business, Innovation and Skills. The Committee calls for details about how research funding proposals apply to all four nations. Dr. Allen's issue focuses on how gastroenterologists can maximize the "value of colonoscopy – where value is defined as quality/cost. Clinical issues are covered, like sedation issues, complications of colonoscopy, and infection risk, but the majority of the articles deal with the discussions that surround quality colonoscopy—articles like: Risk Management and Legal Issues for Colonoscopy; Cost effectiveness of Colonoscopy in Prevention of Colon Cancer; Efficacy and Effectiveness of Colonoscopy: How Do We Bridge the Gap?; Current State of Colonoscopy Performance Measures; Use of Databases and Registries to Enhance Quality; and Maximizing the Value of Colonoscopy in Community, to name a few. In preparation of the changing landscape of healthcare, this issue will be an important one for all practicing gastroenterologists.
