TVR sports cars could really only be English. In so many ways they epitomize what sports cars ought to be in this day and age - very fast, exotically styled, loud and politically incorrect. That was all part of the allure of this quixotic range of English cars. Where other makers of sports cars have sourced componentry from all over the world, TVR has determinedly set about making as much of their cars in-house as possible. The arrival of the recent Tuscan, Cerbera, Sagaris, Typhon and Tamora has seen the company phase out the venerable Rover alloy V8 in favor of its own DOHC in-line 3.6-litre 350 bhp six-cylinder engine that drives the rear wheels through a TVR-made manual gearbox. To say that the road performance of these sports cars is exhilarating would be some kind of enormous understatement. They are electrifyingly fast to drive! All TVRs run to top speeds of over 150 mph and will run the classic 0-60 mph sprint in 5 seconds or less. These are supercar performance figures. They are dynamic sports cars that are designed for extroverts who not only want to be noticed but really enjoy the thrill of driving "on the edge" whenever the opportunity presents itself, and who enjoy the camaraderie of belonging to a car club where their interests are shared. Following on from Stranger Shores, which contained J.M. Coetzee's essays from 1986 to 1999, Inner Workings gathers together his literary essays from 2000 to 2005. Of the writers discussed in the first half of the book, several - Italo Svevo, Joseph Roth, Bruno Schulz, Sandor Marai - lived through the Austro-Hungarian fin de siècle and felt the influence of Schopenhauer, Nietzsche and Freud. Coetzee further explores the work of six of twentieth-century German literature's greatest writers: Robert Musil, Robert Walser, Walter Benjamin (the Arcades Project), Joseph Roth, Gunter Grass, W.G. Sebald, and the poet Paul Celan in his 'wrestlings with the German language'. There is an essay on Graham Greene's Brighton Rock and on the short fiction of Samuel Beckett, a writer whom Coetzee has long admired. American literature is strongly represented from Walt Whitman, through William Faulkner, Saul Bellow and Arthur Miller to Philip Roth. Coetzee rounds off the collection with essays on three fellow Nobel laureates: Nadine Gordimer, Gabriel García Márquez and V.S. Naipaul. Medicare, the world's single largest health insurance program, covers more than 47 million Americans. Although it is a national program, it adjusts payments to hospitals and health care practitioners according to the geographic location in which they provide service, acknowledging that the cost of doing business varies around the country. Under the adjustment systems, payments in high-cost areas are increased relative to the national average, and payments in low-cost areas are reduced. In July 2010, the Department of Health and Human Services, which oversees Medicare, commissioned the IOM to conduct a two-part study to recommend corrections of inaccuracies and inequities in geographic adjustments to Medicare payments. The first report examined the data sources and methods used to adjust payments, and recommended a number of changes. Geographic Adjustment in Medicare Payment - Phase II: Implications for Access, Quality, and Efficiency applies the first report's recommendations in order to determine their potential effect on Medicare payments to hospitals and clinical practitioners. This report also offers recommendations to improve access to efficient and appropriate levels of care. Geographic Adjustment in Medicare Payment - Phase II: Implications for Access, Quality, and Efficiency expresses the importance of ensuring the availability of a sufficient health care workforce to serve all beneficiaries, regardless of where they live. Provides a comprehensive listing of American cartoonists, their works, characters, and titles, that will enable the growing number of comic art scholars to research the field. Published by the American Geophysical Union as part of the Geophysical Monograph Series, Volume 183. For carbon sequestration the issues of monitoring, risk assessment, and verification of carbon content and storage efficacy are perhaps the most uncertain. Yet these issues are also the most critical challenges facing the broader context of carbon sequestration as a means for addressing climate change. In response to these challenges, Carbon Sequestration and Its Role in the Global Carbon Cycle presents current perspectives and research that combine five major areas: The global carbon cycle and verification and assessment of global carbon sources and sinks Potential capacity and temporal/spatial scales of terrestrial, oceanic, and geologic carbon storage Assessing risks and benefits associated with terrestrial, oceanic, and geologic carbon storage Predicting, monitoring, and verifying effectiveness of different forms of carbon storage Suggested new CO2 sequestration research and management paradigms for the future. The volume is based on a Chapman Conference and will appeal to the rapidly growing group of scientists and engineers examining methods for deliberate carbon sequestration through storage in plants, soils, the oceans, and geological repositories.
