This book is about

running modern industrial enterprises with the help of information systems. Enterprise resource planning (ERP) is the core of business information processing. An ERP system is the backbone of most companies' information systems landscape. All major business processes are handled with the help of this system. Supply chain management (SCM) looks beyond the individual company, taking into account that enterprises are increasingly concentrating on their core competencies, leaving other activities to suppliers. With the growing dependency on the

partners, effective supply chains have become as important for a company's success as efficient in-house processes. This book covers typical business processes and shows how these processes are implemented. Examples are presented using the leading systems on the market - SAP ERP and SAP SCM. In this way, the reader can understand how business processes are actually carried out "in the real world". Managing the movement of goods from one place to another is just one small requirement of a Transportation Management (TM) software. To understand the complete process,

there is so much more to consider. This guide provides a comprehensive overview of the transportation processes supported by SAP TM 9.3 including functional highlights, system architecture options (including HANA), and integration aspects. Dive into planning, execution, and tracking processes and detailed configuration. Get best practices on how to best set up capacity management functionality and learn more about charge calculation and settlement. This hands-on guide is for those new to SAP TM, as well as experienced solution consultants, and

includes step-by-step descriptions and screenshots. - A Comprehensive Overview of All of the Processes Enabled by SAP TM - Configuration Best Practices for All Modes of Transport - Instructions for Integrating Transportation Requirements - Tips on Integration with SAP ERP, EWM, GTS, EH&S, EM - Options for Manual, Semi-automated, and Completely Automated Planning This book - compiled by software architects from SAP - is a must for consultants, developers, IT managers, and students working with SAP ERP, but also users who want to know the world behind their

SAP user interface. This research studies the relationship between car manufacturers (CM) and third party logistics providers (TPLP), also known as the logistics partnership, in the outbound delivery channel in the Malaysian

automotive industry. It focuses specifically on the dyad perspective, and demonstrates that several critical success factors are required for a successful relationship between these two parties. Five such factors emanate from the operational dimension and eight from the relational dimension. The five operational factors are: logistics service performance, investment, information sharing, information technology and communication, and price of the logistics service; and the eight relational factors are: trust,

commitment, power, conflict, dependency, co-operation, informal activity, and understanding. The study also reveals that five outcomes are identified that benefit both the CM and the TPLP as a result of the win-win situation accruing to both parties. These are: renewal of the contract, company profitability, improved logistics service performance, knowledge transfer, and company branding. Such benefits enhance the supply chain relationship, and knowledge of these advantages improves current TPLP theory by deepening the understanding of how logistics

partnership can succeed. In order to obtain rich data concerning the CM-TPLP relationship, the researcher adopted a different methodology from that used by previous scholars, who have concentrated on quantitative techniques. In this study, multiple case studies (seven in total) in one industry, the automotive industry, in the non-western context of Malaysia, were conducted. Three main steps in the case study protocol were followed. The first involved a review of the literature pertaining to the themes that required further exploration, together with the

development of the interview questions. In the second step, data were collected using semi-structured interviews, observations, document reviews, photographs and also archival records. Qualitative content analysis was used to analyse the qualitative data. The third stage involved exploring the data until it was found that nothing new was emerging from the interviews, and hence theoretical saturation had occurred. At this point the factors in question were confirmed, and the initial model revised. Additionally, confidentiality was maintained in all respects to protect

the participating organisations and individuals. The findings contribute to the understanding of the CM-TPLP relationship which enhance supply chain relationship and TPLP theory, since they shed light on the operational and relational factors in one specific industry, from a dyadic perspective, and in a non-Western context, thereby adding new dimensions to the existing body of knowledge in this field. The findings benefit practitioners via the novel LPS (logistics partnership success) model generated by the researcher. This indicates the key contributory factors

to the CM-TPLP relationship success. Moreover, the study may have the capacity to generalise to other culturally-similar environments. Are you working with SAP software for the first time, or are you switching from SAP ERP and are confronted with SAP S/4HANA for the first time? Then this quick start guide with its concise overview of the functional scope and a clear introduction to the new SAP Fiori user interface is right for you. Clarify the terms ERP, HANA and S/4HANA, as well as the two licensing options for S/4HANA, on-premise and cloud. You will learn about the essential integrated business

processes and how they are mapped in SAP S/4HANA using the Fiori apps. To do this, the authors take you through the modules related to logistics, such as materials management, sales and distribution, and production planning and control, and then demonstrate the integration with financial accounting and controlling. You will learn about the most important functions as well as organizational and master data objects, and by the end of the book you will also know which components are assigned to each module. Finally, using case studies, you will walk step by step through the three

most important end-to-end processes in SAP S/4HANA: Order to Cash, Purchase to Pay and Forecast to Fulfill. - Cross-module presentation of business processes - SAP basic terms explained in a simple and understandable way - Introduction to the new user interface SAP Fiori - Includes 4 hours of video material Christian A. Ullrich investigates the optimization potential of integrated supply chain scheduling approaches. Considering a company-internal supply chain, the author's first research question is whether the results of integrating machine scheduling

and vehicle routing are significantly better than those of classic decomposition approaches which break down the overall problem and solve the subproblems successively. The scope is then broadened to include the machine and transportation scheduling problems of two and more companies at consecutive supply chain stages. The last part of this dissertation addresses supply chain contracting issues. The Advanced Reporting Guide includes instructions for advanced topics in the MicroStrategy system, building on information in the

Basic Reporting Guide. Topics include reports, Freeform SQL reports, Query Builder reports, filters, metrics, Data Mining Services, custom groups, consolidations, and prompts. Value creation is no longer achieved through a single company alone, or through a network of local suppliers, but rather through wide ranging, even global supply chains. This reduces the transparency of the benefits and risks of the various supply chain setups and activities used for improving the performance of the supply chain. Such supply chain initiatives usually result in an

investment by all supply chain partners involved, including the respective Chief Financial Officer (CFO). The supply chain partners therefore need a tool to show what improvements they can provide in logistics & generally the reduction of inventory and reduction of lead time & in terms of those financial variables that describe the value added to the company. The connection between supply chain management and financial management is currently very important. The integration of the two management levels is extremely important for the success of a supply

chain initiative. Showing the possible benefits and risks for all concerned is a prerequisite for assessing the economic value of the initiative and perceiving the win-win situation. This book and the "Supply Chain Value Contribution (SCVC)" method described therein provide: - An approach to showing the cause and effect of supply chain initiatives on supply chain performance and working capital utilization, on the basis of the well-established Supply Chain Operations Reference (SCOR)-model. - A clear and traceable approach on how to measure and sell the value

created by the resulting operational supply chain performance improvements. The application of the SCVC method is described in two use cases. Due to the comprehensive but pragmatic presentation of the content, this book will be of value to both practitioners and academics alike. EBOOK: Logistics and Supply Chain Management Import Export Documentation and Framework Foreign Exchange Regulations and Formalities Custom Clearance of Export and Import Cargo Export Order Export Promotion Measures Import Documentation and Procedures The Advanced Planner

and Optimiser (APO) is the software from SAP dedicated to supply chain management. This book addresses the question of how to implement APO in a company. It is written from a long years' experience in implementation projects and provides project managers and team members with the necessary know-how for a successful implementation project. The focus is on introducing modeling approaches and explaining the structure and interdependencies of systems, modules and entities of APO. Another concern is the integration with the R/3 system(s), both technically and from a process

point of view. Since APO projects differ significantly from other SAP projects, some key issues and common mistakes concerning project management are covered. SAP Global Trade Services (GTS) helps companies maximize supply chain performance and reduces the overall cost and risk of global trade by ensuring regulatory compliance, accelerating trade activity, and enabling trade compliance automation. The Practical Guide to SAP GTS helps the user navigate the system, while offering compliance insight to maximize their return on investment. Dive into difficult-to-

navigate menus and review available functionality. Using screenshots and detailed instructions, readers will obtain best practices for meeting and exceeding compliance standards. Includes suggested audit plans to sustain long term compliance. The book is current to version 10.1 and explores version 11.0 and its new features. This book offers: - Tips and tricks for leveraging SAP GTS to automate trade compliance - Walk step by step through business processes - Overview of regulatory requirements and compliance suggestions -

This book presents case studies of South Asian companies that have strategic business implications, highlighting the complex interplay of business and social dynamics in South Asia. This region is a wide agglomeration of very different countries that share somewhat common cultures and issues and yet it is torn apart by religion and politics. There is an abundance of local entrepreneurship

but a widespread institutional void. The book investigates how local companies survive and thrive in this environment and discusses those companies that have withstood the competitive pressure of MNCs, depicting their management and business practices. In today's world, where multinationals are so omnipresent that their management and business practices are considered as the de facto recipe for success, there is a need to have an alternative view that challenges the ubiquitousness of multinational management practices. The case studies in this book focus on the

business and management practices of local organizations in South Asia and thus provide that alternative viewpoint of how to achieve success in South Asia. Exposing readers to a local perspective on doing business in South Asia, it is a valuable resource for students and practitioners of management.
