The federal government's No Child Left Behind Act has thrust high-stakes testing - its goals, methods, and consequences - into the educational limelight. The four-fold purpose of this book is to: describe the nature of high-stakes testing; identify types of collateral damage that have attended the testing programs; analyze methods different groups of people have chosen for coping with the damage and suggest lessons to be learned from the high-stakes-testing experience. The six groups of people whose coping strategies are inspected include: politicians and their staffs; educational administrators and their staffs; parents and the public; test makers and test administrators; teachers and students. Importantly, the author avoids aligning himself with the test-bashing rhetoric of those who oppose high-stakes testing, especially the No Child Left Behind Act. Key features of this outstanding new book include: illustrative cases. The book offers more than 350 cases of collateral damage from high-stakes testing--and people's coping strategies--as reported in newspapers over the 2002-2004 period. background perspectives. Part I examines the influence of high-stakes testing on: 1) what schools teach; 2) how student progress is evaluated; 3) how achievement standards are set; and 4) how test results are used. participant responses. Part II, which is the heart of the book, devotes a separate chapter to the coping strategies of each of the major participants in the high-stakes testing movement: politicians and their

staffs, educational administrators and their staffs, parents and the public, test-makers and test-givers, teachers, and students. summary chapter. The last chapter (Lessons to Learn) offers suggestions for minimizing collateral damage by adopting alternative approaches not used in the creation of our current high-stakes testing programs, particularly the federal government's No Child Left Behind Act. This book is appropriate for any of the following audiences: students taking evaluation or administration courses in schools of education, inservice administrators and teachers, policy makers, and those members of the general public who are concerned about the fate of schooling in America. Features of Washington Real Estate License Exam Prep (WA-RELEP): National Principles & Law Key Point Review (60 pages) Real Estate Math Key Formula Review & Practice (20 pages) Washington-Specific Laws and Practices (30 pages) National Practice Tests (500 questions) Washington Practice Tests (115 questions) Washington Sample Exam (100 questions) We know the real estate licensing exam can be tough, and very nerve-wracking to prepare for. That's why we created the Washington Real Estate License Exam Prep (WA-RELEP) the way we did. Since we have been managing real estate schools and developing curriculum for forty years, we know how all this works - or fails to work. WA-RELEP is comprehensive in that it contains both key content review

and testing practice. And the text review is Washington-specific - not just simplistic national content, but terse, relevant and accurate Washington laws and regulations presented as a well-organized set of state 'key point reviews' ideal for pre-test memorization. But let's not dismiss the importance of the national content either. WA-RELEP's national key point reviews are a succinct compression of tested national principles and practices that comprise the national portion of state license exams from coast to coast. Our content is drawn from our own national textbook, Principles of Real Estate Practice - one of the most widely used principles textbooks in the country. Finally, our national content, as well as our question selection, is further tailored to the state testing outline promulgated by AMP/PSI for Washington. Thus the breadth and depth of the law reviews and test questions reflect the topic emphasis of your state's testing service and your Washington license exam. A word about the test questions... WA-RELEP's testing practice section consists of ten national practice tests, five state practice tests, and one state exam sample test. The practice tests are roughly 50 questions in length and the sample test is 100 questions. The test questions are designed to cover the content covered by the law reviews - which reinforces your learning of the total body of information tested by your state exam. The questions are direct, to the point, and designed to test your understanding. When you have completed a given test, you can check your answers against the answer key in the appendix. You may also note that each question's answer is accompanied by a brief explanation, or "rationale" to further reinforce your understanding. In the end, as you know, it's all up to you. Unlike other publications, we are not going to tell you that using this book will guarantee that you pass your state exam. It still takes hard work and study to pass. But we have done our best here to get you ready. Following that, the most we can do is wish you the best of The must-have driver's license practice test book for anyone who wants to ace Washington State's DMV exam. Washback refers to the influence of language testing on teaching and learning. This volume, at the important intersection of language testing and teaching practices, presents theoretical, methodological, and practical guidance for current and future washback studies. In the field of language testing, researchers' major interest has traditionally been focused on issues and solving problems inherent in tests in order to increase their reliability and validity. However, the washback effect goes well beyond the test itself to include factors, such as curriculum, teacher and learner behaviors inside and outside the classroom, their perceptions of the test, and how test scores are used. Only recently have researchers started to empirically investigate the phenomenon of washback. This volume of such research serves two essential purposes by: *providing an overview of the complexity of washback and the various contextual factors entangled within testing, teaching, and learning; and *presenting empirical studies from around the world that offer insights into the effects of washback in specific educational contexts and models of research on which future studies can be based. The extensive use of test scores for various educational and social purposes in society nowadays makes the washback effect a high-interest phenomenon in the day-to-day educational activities of teachers, researchers, program coordinators/directors, policymakers, and others in the field of education. Washback in Language Testing: Research Contexts and Methods is a valuable resource for those who are interested in the application of findings to actual teaching and learning situations or conduct washback research in their own contexts, including educational and psychological testing experts, as well as alternative assessment people in all fields, and for policy- and decision-makers in educational and testing organizations. This book contains more than 300 questions and answers according to the new written DMV permit test. To pass the test, you must obtain (number out of number) correct answers. A correct answer can include several elements of an answer. These tests are intended to verify that you know the rules and that you know how to implement them. Some questions from the new exam appeal to behavior, situations, and your ability to use common sense. This book offers many questions with solutions. For the correct answers and explanations, please refer to the DMV Manual. Objectives We used Washington State Department of Health (DOH) Zika surveillance data from January 1 to October 31, 2016 to (1) describe the population of individuals for whom Zika testing was requested, (2) determine whether health care provider (HCP) disciplines differ in appropriate referral practices for Zika testing, and (3) determine whether HCP disciplines differ in referral of positive Zika patients for testing. Methods Descriptive analysis with t-test and Chi-squared test was used to evaluate whether patient characteristics and HCP discipline differed by public health test approval status and laboratory results. Logistic regression was used to calculate odds ratios of approved test referral and referral of positive Zika patients by HCP discipline. Results Obstetrician/Gynecologist (OBGYN) and General Practice disciplines bore the greatest burden of Zika testing requests. Patient age, sex, pregnancy and symptom status, and discipline of HCP that made the request differed significantly by public health test approval status and laboratory results.

Compared with OBGYNs, General Practice and "Other" disciplines had elevated odds of referring patients for whom testing was not approved by public health, whereas Emergency and Internal Medicine disciplines had elevated odds of requesting testing for laboratory positive patients. Conclusions Given the potentially severe consequences of Zika infection to pregnant women, testing guidance in place during this study appropriately fostered disproportionate testing of asymptomatic pregnant females. However, asymptomatic pregnant women rarely test positive. This supports the recent Center for Disease Control and Prevention recommendation to limit routine testing of asymptomatic pregnant females.
