**Abstract: This color illustrated brochure discusses the relationship of high cholesterol to the risk of coronary heart disease. To lower cholesterol levels the following is recommended: diets low in saturated fat and cholesterol, regular medical checkups, exercise and maintaining a desirable weight. A glossary is included. This report presents the Nat. Cholesterol Ed. Program's (NCEP) updated recommendations for cholesterol testing and management. It focuses on the role of the clinical approach to prevention of coronary heart disease (CHD). This report, like the 2nd Report (ATP II), continues to identify low-density lipoprotein (LDL) as the primary target of cholesterol-lowering therapy. Since ATP II, a number of controlled clinical trials with newer cholesterol-lowering drugs have been reported. These trials demonstrated remarkable reductions in risk for CHD, in both primary and secondary prevention. Their results enrich the evidence base upon which the new guidelines are founded. Includes numerous tables and a 17-page Executive Summary. The panel examined the available evidence on coronary heart disease and high blood cholesterol and updated, where appropriate, the existing recommendations for management of high blood cholesterol in adults. Provides new recommendations for: patients with established coronary heart disease and others at high risk for coronary heart disease; HDL-cholesterol in coronary heart disease risk assessment; cholesterol lowering in women, the elderly, and young adults; physical activity and weight loss as components of dietary therapy; and delay of drug treatment in most young men and premenopausal women who are otherwise at low risk for coronary heart disease. Discusses cholesterol lowering and total mortality, and cost-effectiveness of cholesterol lowering. Features the National Cholesterol Education Program (NCEP), provided by the American Heart Association. Notes the NCEP promotes cooperation among groups concerning cholesterol education and was created by the National Heart, Lung, and Blood Institute.**

**Abstract: The hearing reported in this document considered the debate over the role government should play in cholesterol education. The value of the National Heart, Lung, and Blood Institute's massive National Cholesterol Education Program in questioned and the placement of such a high priority on cholesterol education while other national health problems exist is challenged. Two**

*witnesses testify that the hazards of cholesterol have been greatly exaggerated. Methods of cholesterol screening (public screenings vs. private visits to doctors) and their relative merits are discussed. Other witnesses assert that the dangers of cholesterol are not overstated and that the government's role in publicizing cholesterol related information will help to lower suffering and death from chronic heart disease. Features the National Cholesterol Education Program (NCEP), provided by the American Heart Association. Notes the NCEP promotes cooperation among groups concerning cholesterol education and was created by the National Heart, Lung, and Blood Institute. Features the National Cholesterol Education Program (NCEP), provided by the American Heart Association. Notes the NCEP promotes cooperation among groups concerning cholesterol education and was created by the National Heart, Lung, and Blood Institute. This publication contains the report of the panel on its findings and recommendations regarding blood cholesterol reduction. Recommendations include: intake of less than 10 percent of total calories from saturated fatty acids; intake of an average of 30 percent, or less, of total calories from all fat; dietary energy levels needed to reach or maintain a desirable body weight; and less than 300 mg. of cholesterol per day. The panel makes recommendations for various groups to become involved with general population strategies.*
