To Have and Have Not Jul 26 2020 Jonathan Marshall makes a provocative statement: it was not ideological or national security considerations that led the United States into war with Japan in 1941. Instead, he argues, it was a struggle for access to Southeast Asia's vast storehouse of commodities—rubber, oil, and tin—that drew the United States into the conflict. Boldly departing from conventional wisdom, Marshall reexamines the political landscape of the time and recreates the mounting tension and fear that gripped U.S. officials in the months before the war. Unusual in its extensive use of previously ignored documents and studies, this work records the dilemmas of the Roosevelt administration: it initially hoped to avoid conflict with Japan and, after many diplomatic overtures, it came to see war as inevitable. Marshall also explores the ways that international conflicts often stem from rivalries over land, food, energy, and industry. His insights into "resource war," the competition for essential commodities, will shed new light on U.S. involvement in other

conflicts—notably in Vietnam and the Persian Gulf. This title is part of UC Press's Voices Revived program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. This title was originally published in 1995.

Mercedes-Benz W124 Aug 27 2020 Designed by Mercedes's head of design Bruno Sacco, the W124 range immediately became the benchmark by which medium-sized car models were judged in the late 1980s due to its engineering excellence and high build quality. There was a model to suit every would-be-buyer, from the taxi driver through the family motorist and on to those who were willing and able to pay for luxury and performance. This book covers: design, development and manufacture of all models of W124 including estates, cabriolets and the stylish coupe range; engines and performance; special editions and AMG models and, finally, buying and owning a W124 today. Superbly illustrated with 264 colour photographs.

Association of Motor Vehicle Teachers'

Newsletter The Motor Vehicle has been an essential reference work for both the student and practising engineer ever since the first edition appeared in 1929. Today it is as indispensable to anyone with a serious interest in vehicle design techniques, systems and construction as it was then. The current edition has undergone a major revision to include seven new chapters. These include Electric Propulsion; covering all aspects from lead acid and alternative batteries to fuel cells and hybrid vehicles, Static and Dynamic Safety, and Wheels and Tyres. The chapter on the compression ignition engine has been expanded to form three chapters, concentrating on aspects such as common rail injection, recently developed distributor type pumps and electronic control of injection. Automatic, semi-automatic and continuously variable ratio transmissions are covered in two new chapters. A third contains

information on the latest developments in computer-aided control over both braking and traction, for improving vehicle stability, while another contains entirely new information on the practice and principles of electrically-actuated power-assisted steering. Also included is coverage of material detailing the latest knowledge and practice relating to safety systems, vehicle integrity, braking systems and much more. The established layout of the book is retained, with topics relating to the Engine, Transmission and Carriage Unit dealt with in turn. Each chapter is well-provided with diagrams, sections, schematics and photographs, all of which contribute to a clear and concise exposition of the material under discussion. Latest extensive revisions to a well-established title New chapters on electric propulsion and vehicle safety.
